Quality: Phrap Quality >=40 100% of Sequence;
Estimated Total Number of Errors is 0.
Estimated Total Number of the entire sequence of the clone (entire sequence is 146.7kb). It is clipped at the overlap with AC012624.
The number of bases overlapped is 90404.

It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently
consists of 7 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have
provided by the submittor.
This sequence will be replaced

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 seq_documentation_block:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqn-emb1/NA1997.DAT:AAT42754
The chicken CHD-W gene (AMT42754) acting alone or in conjunction with the closely related CHD-1A gene (AMT42771) is suggested to initiate femala development in birds. The sequence of CDH-W was deduced from 2 clones isolated from a 10-day chick embryo library using a fragment of the CHD-1A gene as a probe. The CHD-W gene is located on the W chromosome. Probes based on CHD-W and CHD-1A give a W chromosome specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-W nucleic acids can also be used to control the sex of progeny of a bird.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Fig 8; 76pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Avian chromodomain-helicase-DNA binding genes determine sex in birds - used for sex determn. and to control sex of progeny

                                                                                                                                                                                                                                                                                                                                                                The chicken CHD-W gene (AAT42754) acting alone or in conjunction with the closely related CHD-1A gene (AAT42751) is suggested to initiate female development in birds. The sequence of CDH-1A was deduced from 3 clones isolated from a stage 10-12 chicken embryo cDNA library using a great tit CHD-W sequence (see also AAT42755) as probe. The CHD-1A (A = AV1an) gene shows close identity to the mouse CHD-1 gene (see also AAT42756-57). It is located on an autosome or z chromosome. Probes based on CHD-W and CHD-1A give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-1A nucleic acids can also be used to control the sex of the progeny of a bird.

                                                                                                                                                                Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A - Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (AAT42759) and and the great tit CHD-W gene (AAT42759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42754) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 153 BP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqn-emb1/NA1997.DAT:AAT42759
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Align seg 1/1 to: AAT42758
                                                         Bases 3855-3977 (AAR142756) of the mouse CHD-1 gene show homology to portlons of the chicken CHD-1A (A = Avian) gene (AAR142757), chicken CHD-W (W refers to the W chromosome) gene (AAR142758) and and the great tit CHD-W gene (AAR142759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAR142751) and CHD-W (see also AAR142754-55) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.
                                                                                                                                                                                                                                                                                                                                                                               Avian chromodomain-helicase-DNA binding genes determine sex birds - used for sex determn, and to control sex of progeny
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bird; sex determination; chromodomain-Helicase-DNA binding CHD-1A; CHD-W; W chromosome; ss.

                           The altered vertebrate telomere repeat binding protein (A-TRF) has a telomere repeat binding factor (TRF) dimerisation domain, and forms a hetero-dimer with TRF, preventing it from binding to the specified repeat sequence. A-TRF, optionally expressed by gene therapy, is used to inhibit shortening of telomeres associated with ageing (for cosmetic purposes) and disease, e.g. ataxia telangelctasia, Down's syndrome, atrophy of the skin, age-related macular degeneration, atherosclerosis, tumours and viral (including human immune deficiency virus) infection. Cells expressing A-TRF also have an increased life span in vitro, e.g.
                                                                                                                                                                                                                  Nucleic acid encoding altered telomere repeat binding protein and related vectors - transformants, hetero-dimers and antibodies, used to inhibit shortening of telomersees caused by ageing or disease, also used to extend life of cells in culture
                                                                                                                                                                                                                                                                                                                                             Bianchi A,

                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01076-ABL30511), expressed DNA sequences (ABL01040-ABL16175) and the encoded proteins (ABB07737-ABB72072).
           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                       Claim 1; SEQ ID NO 13811; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 6240 BP; 1675 A; 1682 C; 1760 G; 1123 T; 0 other;
Sequence 9933 BP; 2711 A; 2468 C; 2538 G; 2216 T; 0 other;
                                                The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-MAR-2000; 2000US-191637P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a cDNA encoding a digestive system antigen of the invention.

These are shown in AAIS7547-AAIS7619 and AAM38569-AAM38641. These can be used diagnosis, prevention and treatment of cancer of the colon The present sequence is a colorectal cancer antigen coding the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides polynucleotides which encode novel protein Kinase homologs expressed in various human cells and tissues. The present sequence represents the clone 23789 cDNA fragment derived from a human inflammed adenoid cDNA library. The cDNA encodes a protein kinase which shows homology to the CHKPRNK chiken tyr kinase. Cells and host cells can be used for recombinant production of the protein kinase homolog. The recombinant proteins may be used to raise antibodies for use as anti-kinase therapeutics. Oligonucleotides based on the polynucleotide sequences, i.e. probes and antisense constructs, the peptides and antibodies are claimed to be useful as tools for studying signalling cascades in cells and proteins, and for identifying inhibitors (drugs) to treat diseases and inflammatory conditions associated with abnormal kinase expression. Diseases that are claimed to be treatable include human x-linked agammaglobulinaemia, carcinomas, restrenceds. Cholora-hased seatic shock are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. For this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

They can be used to measure generation in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        243
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 544 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 4;
   The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human bone marrow expressed single exon probe SEQ ID NO: 10669.
